

Vice President of Operations

Position Description:

As a member of the Sensydia management team, reporting to the President and CEO, the Vice President of Operations will be responsible for helping ensure the timely delivery of Sensydia's revolutionary Cardiac Performance System. Working closely with the team members from management, R&D, clinical and external vendors, this position will:

- Assist with financial management, budgeting and planning activities
- Manage external suppliers/consultants to ensure parts/programs are delivered on budget and on schedule
- Develop and manage an inventory management system
- Travel to vendors to assess manufacturing programs and to negotiate timelines and contracts
- Interface closely with the R&D team to help ensure the product is designed to manufacture efficiently
- Identify corrective actions to address issues and risks
- Lead, collaborate with, and mentor other employees
- Advance operational systems, processes and policies to support better reporting, information flow and organization planning

Qualifications:

The ideal Vice President of Operations will have 10 or more years of experience in a fast-paced, demanding medical device or med-tech organization with a proven track record of managing operations and/or finance. To be successful in this position, the candidate must have:

- Substantial experience in a small company environment where being a hands-on, working leader is a must
- Track record of getting things done efficiently both individually and as the leader of a project team
- Excellent communication skills and exude a positive attitude that motivates others to deliver results
- A proactive leadership style that takes initiative in assessing and responding to project challenges
- The ability to develop and run purchasing procedures and manage procurement activities
- Demonstrated the ability to lead meetings efficiently and to stay on task
- Experience developing timelines, identifying critical paths and developing contingency programs
- Proven success working closely with vendors and suppliers to coordinate purchasing of parts, managing production schedules and deliverables, negotiating contracts and facilitating manufacturing
- Software, database management systems?

In addition, a BS degree (or higher) in engineering, operations, management or equivalent is required.

Location:

The position is based in the Los Angeles area and requires the ability to travel up to 35% of the time.

Company Description:

Sensydia is an early stage medical technology company that advances cardiovascular care through the development and commercialization of a revolutionary platform to measure and assess critical heart function accurately and non-invasively.
